## SIXTE Workshop 2024

The SIXTE team is happy to announce its next hands-on workshop to be held **in person in SRON (Leiden) from 6-8 November 2024**. The team will present the new features of the major release of version 3 of SIXTE. Therefore, the workshop is well suited to both experienced and new users. The workshop will focus on simulations for XRISM - Resolve and Xtend - and NewAthena - WFI and X-IFU, as well as other future X-ray missions. Participants will have the opportunity to receive assistance in setting up their own simulations for observation proposals or scientific analysis.

**Registration (free fee) is mandatory**, the number of participants is limited to 40, and admission will be on a first-come, first-served basis. Limited travel and accommodation grants are available to early-career researchers.

We encourage all participants to consider travelling by train **to help reduce our carbon footprint**.

For the registration and further information, please visit the [workshop website](#).
